

Impact summary, 2016–2023

In 2016, a results-based funding model was developed to improve the reliability of rural drinking water supply services in Kenya. The Water Services Maintenance Trust Fund has tested a professional service delivery model in two counties and attracted new sources of results-based funds to guarantee water services in rural communities, schools and health care facilities. Water users pay an affordable share of the costs to guarantee repairs are completed in a few days rather than weeks or months. This summary reports some of the impacts from maintaining rural handpumps and small piped systems.

3,336

3,336 repairs completed from over 100 handpumps and small piped schemes

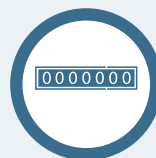

99%

Over 99% of repairs were completed in two days or less in 2022

70,000

Over 70,000 rural water users pay for professional maintenance services

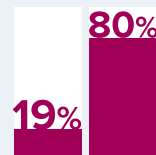

500 million litres

Over 500 million litres of water have been supplied to communities and schools

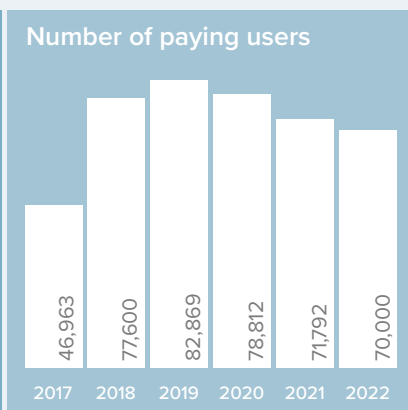

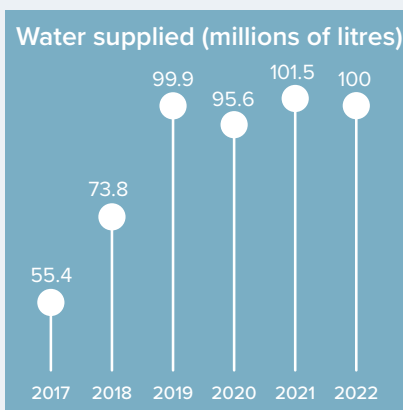

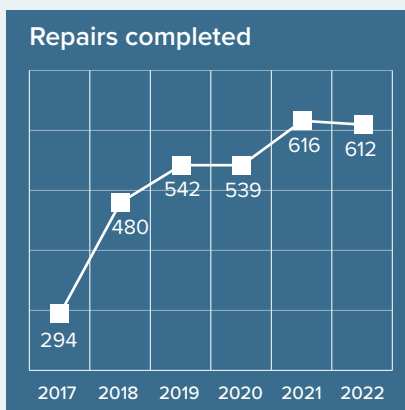

1 in 6

For every USD 1 paid by users, USD 5 is paid by non-donor results-based funders

19% to 80%

For every USD 1 paid by users, USD 5 is paid by non-donor results-based funders

Donor and non-donor contributions

USD	2017	2018	2019	2020	2021	2022
Donor	9,065	22,523	29,372	45,618	22,350	45,833
Non-donor	38,744	48,020	47,246	134,917	134,071	189,659
Total (USD)	47,809	70,543	76,619	180,535	156,421	235,492
% Non-donor	19%	32%	38%	75%	86%	80%
